## 🚀 Mission Overview

Voyager 1, launched on September 5, 1977, is currently humanity's most distant artificial object, traveling through interstellar space at over 160 AU from the Sun. This dashboard provides real-time analysis of its position and magnetic field measurements from NASA's archives.

Launch Date
**September 5, 1977**

Current Environment
**Interstellar Medium**

Data Sources
**NASA JPL HORIZONS & SPDF**

Mission Status
**Active & Transmitting**
